INDEX TO SUBJECTS

A

Acid: Blood, first change (LAUG) 161

Acid-base: Blood (ROBINSON, PRICE, and CULLEN) 7

Acid-base equilibrium: Urine (SENDROY, SEELIG, and VAN SLYKE) 479

Acidosis: (SENDROY, SEELIG, and VAN SLYKE) 463, 479

Adrenals: Cortex hormone, distribution (PFIFFNER and VARS) 645

— —, preparation (PFIFFNER, VARS, and TAYLOR) 625

— —, various species (VARS, TAYLOR, and PFIFFNER) 639

Age: Blood serum inorganic phosphorus, horse, effect (PEARSON) 1

Pancreas insulin, cattle, effect (FISHER and SCOTT) 305

Alanine: Cystinyldi-, synthesis (WHITE) 141

Oxidation, tissues (BERNHEIM and BERNHEIM) 79

Alkaloids: Ergot (JACOBS and CRAIG) 393

Amides: *l*-Tryptophane, growth and kynurenic acid production, effect (BAUGUESS and BERG) 615

Amines: Iodoacetic acid reaction (MICHAELIS and SCHUBERT) 331

Amino acids: Basic, proteins, determination (BLOCK) 457

Hydroxy-, phosphoric esters, synthesis (LEVENE and SCHORMÜLLER) 595

Metabolism (CHASE and LEWIS) 315

Antitrypsin: Egg white (BALLS and SWENSON) 409

Arginase: Blood (WEIL and RUSSELL) 505

Microdetermination, manometric (WEIL and RUSSELL) 505

B

Blood: Acid change, first (LAUG) 161

Acid-base (ROBINSON, PRICE, and CULLEN) 7

Filtrates, protein-free, zinc hydroxide powder for preparation (LETONOFF) 693

Lipid, total, lipemia, alimentary (WILSON and HANNER) 323

Lipids, depancreatized dog, insulin effect (CHAIKOFF and KAPLAN) 267

Magnesium deprivation effect (ORENT, KRUSE, and MCCOLLUM) 573

Blood cell: Lipids, microdetermination, gasometric (KIRK, PAGE, and VAN SLYKE) 203

XUM

Blood plasma: Lipids, microdetermination, gasometric (KIRK, PAGE, and VAN SLYKE) 203

Blood serum: Dissociation constant, apparent, Henderson-Hasselbalch equation (ROBINSON, PRICE, and CULLEN) 7

Blood sugar: Goat (CUTLER) 653

Bone: Magnesium deprivation effect (ORENT, KRUSE, and MCCOLLUM) 573

C

Calcium: Blood, partition, chicken (HELLER, PAUL, and THOMPSON) 357

Cancer: Tissue, glyoxalase (PLATT and SCHROEDER) 179

Carbohydrate: Metabolism, copper rôle (KEIL and NELSON) 343

—, goat (CUTLER) 653

Carbon dioxide: Urine, tension (SENDROY, SEELIG, and VAN SLYKE) 479

Carbon monoxide: -Combining power, blood hemoglobin, fish, acidity effect (ROOT and GREEN) 545

Carboxylic acids: Disubstituted, symmetrical disubstituted methanes from optically active homologous series (LEVENE and MARKER) 173

Carotenoid pigments: Absorption spectra, liquid air temperatures (HILBERT and JANSEN) 97

Carotenoid pigments—*continued:*

Cow-pea leaves, absorption spectra, liquid air temperatures (HILBERT and JANSEN) 97

Casein: Peptic digest (JONES and GERSDORFF) 707

Cephalin: Lecithin-, fraction, milk, fatty acids (KURTZ, JAMIESON, and HOLM) 717

Chicken: Blood calcium and phosphorus, partition (HELLER, PAUL, and THOMPSON) 357

1-Chlorotriacetylglucuronic acid: Methyl ester, synthesis (GOEBEL and BABERS) 63

Cholesterol: Free and combined, microdetermination (SCHOENHEIMER and SPERRY) 745

Copper: Carbohydrate metabolism, rôle (KEIL and NELSON) 343

Hemoglobin formation, iron supplement (SCHULTZE, ELVEHJEM, and HART) 735

Cow-pea: *See* Pea

Cystine: Derivatives, reactivity (FRUTON and CLARKE) 667

Pento-, synthesis (DU VIGNEAUD, DYER, JONES, and PATTERSON) 401

Reactivity (FRUTON and CLARKE) 667

Cystinyldialanine: Synthesis (WHITE) 141

Cystinyldiglycine: Synthesis (WHITE) 141

E

Egg: White, antitrypsin (Balls and Swenson) 409
Yolk fat, depot fat, relation (Almquist, Lorenz, and Burmester) 365
Enzyme: Proteolytic, fig tree latex (Robbins and Lamson) 725
See also Antitrypsin, Arginase, Glyoxalase, Pepsin, Rennin, Trypsin
Ergot: Alkaloids (Jacobs and Craig) 393

F

Fat: Blood, lipemia, alimentary, effect (Wilson and Hanner) 323
Body, fatty acids, saturated, dietary, effect (Barbour) 281
Egg yolk, depot fat, relation (Almquist, Lorenz, and Burmester) 365
-Free diet, male sterility effect (Evans, Lepkovsky, and Murphy) 445
— —, reproduction and lactation, effect (Evans, Lepkovsky, and Murphy) 431
Milk, human (Bosworth) 235
Fatty acids: Milk, lecithin-cephalin fraction (Kurtz, Jamieson, and Holm) 717
Saturated, as energy source, reproduction and lactation effect (Evans, Lepkovsky, and Murphy) 441
—, dietary, body fat, effect (Barbour) 281
Fatty acids—*continued:*
Unsaturated, vital need (Evans, Lepkovsky, and Murphy) 431, 441, 445
Fig: Tree, latex, proteolytic enzyme (Robbins and Lamson) 725
Fish: Blood hemoglobin carbon monoxide-combining power, acidity effect (Root and Green) 545
Fluorosis: Reducing substances (Phillips, Stare, and Elvehjem) 41
Tissue respiration (Phillips, Stare, and Elvehjem) 41

G

Galacturonic acid: *dl*-, resolution (Niemann and Link) 773
Glucose: Skin, determination, Hagedorn-Jensen method (Pillsbury and Kulchar) 351
Glucuronic acid: α- and β-tetraacetyl-, methyl ester, synthesis (Goebel and Babers) 63
1-Chlorotriacetyl-, methyl ester, synthesis (Goebel and Babers) 63
Derivatives (Goebel and Babers) 63
l-, synthesis (Niemann and Link) 773
Glycine: Cystinyldi-, synthesis (White) 141
Glyoxalase: Tissue, normal and cancerous (Platt and Schroeder) 179
Goat: Blood phosphate, inorganic (Cutler) 653
— sugar (Cutler) 653

Gonadotropic material: Determination (KATZMAN and DOISY) 125
Growth: *l*-Tryptophane amides, effect (BAUGUESS and BERG) 615

H

Hagedorn-Jensen: Skin glucose, determination (PILLSBURY and KULCHAR) 351
Hemoglobin: Blood, carbon monoxide-combining power, fish, acidity effect (ROOT and GREEN) 545
Formation, copper supplement to iron (SCHULTZE, ELVEHJEM, and HART) 735
Henderson-Hasselbalch: Equation, blood serum, apparent dissociation constant, value (ROBINSON, PRICE, and CULLEN) 7
—, urine, application (SENDROY, SEELIG, and VAN SLYKE) 463
Hexuronic acids: Synthesis (NIEMANN and LINK) 773
Homomethionine: Synthesis (DU VIGNEAUD, DYER, JONES, and PATTERSON) 401
Hydroxyamino acids: Phosphoric esters, synthesis (LEVENE and SCHORMÜLLER) 595
Hydroxyprolinephosphoric acid: *l*-, synthesis (LEVENE and SCHORMÜLLER) 595

I

Insulin: Blood lipids, depancreatized dog, effect (CHAIKOFF and KAPLAN) 267
Insulin—*continued:*
Pancreas, cattle, age effect (FISHER and SCOTT) 305
Peptic hydrolysis (FISHER and SCOTT) 289
Iodoacetic acid: Mercaptans and amines, reaction (MICHAELIS and SCHUBERT) 331
Iron: Hemoglobin formation, copper supplement (SCHULTZE, ELVEHJEM, and HART) 735
Liver, distribution, peptic digestion and autolysis (MCFARLANE) 245
Tissue, distribution, peptic digestion and autolysis (MCFARLANE) 245

K

Keratin: (GODDARD and MICHAELIS) 605
Kynurenic acid: Production, *l*-tryptophane amides, effect (BAUGUESS and BERG) 615

L

Lactation: Fat-free diet, effect (EVANS, LEPKOVSKY, and MURPHY) 431
Fatty acids, saturated, as energy source (EVANS, LEPKOVSKY, and MURPHY) 441
Latex: Fig tree, proteolytic enzyme in (ROBBINS and LAMSON) 725
Lecithin: -Cephalin fraction, milk, fatty acids (KURTZ, JAMIESON, and HOLM) 717
Leucine: Absorption rate, gastrointestinal tract (CHASE and LEWIS) 315

Leucine—*continued:*
Isomers, absorption rate, gastrointestinal tract (CHASE and LEWIS) 315
Lipemia: Alimentary, blood lipid, total, and iodine number, effect (WILSON and HANNER) 323
Lipid(s): Blood cells, microdetermination, gasometric (KIRK, PAGE, and VAN SLYKE) 203
—, depancreatized dog, insulin effect (CHAIKOFF and KAPLAN) 267
— plasma, microdetermination, gasometric (KIRK, PAGE, and VAN SLYKE) 203
Milk (KURTZ, JAMIESON, and HOLM) 717
Tissue, microdetermination, gasometric (KIRK, PAGE, and VAN SLYKE) 203
Total, blood, lipemia, alimentary, effect (WILSON and HANNER) 323
Tubercle bacillus, chemistry (SPIELMAN) 87
Liver: Iron distribution, peptic digestion and autolysis (MCFARLANE) 245
Lysergic acid: (JACOBS and CRAIG) 393
Lysine: *dl*-, synthesis (ECK and MARVEL) 387

M

Magnesium: Deficiency (KRUSE, SCHMIDT, and MCCOLLUM) 553
(ORENT, KRUSE, and MCCOLLUM) 573
Magnesium—*continued:*
Deprivation, blood effect (ORENT, KRUSE, and MCCOLLUM) 573
—, bone effect (ORENT, KRUSE, and MCCOLLUM) 573
—, mineral metabolism effect (KRUSE, SCHMIDT, and MCCOLLUM) 553
Mercaptans: Iodoacetic acid reaction (MICHAELIS and SCHUBERT) 331
Methanes: Disubstituted, symmetrical, from optically active homologous series of disubstituted carboxylic acids and derivatives (LEVENE and MARKER) 173
Methionine: Homo-, synthesis (DU VIGNEAUD, DYER, JONES, and PATTERSON) 401
Proteins, determination (BAERNSTEIN) 451
Milk: Human, non-protein nitrogen constituents (ERICKSON, GULICK, HUNSCHER, and MACY) 145
Lipids (KURTZ, JAMIESON, and HOLM) 717
Mineral: Metabolism, magnesium deprivation, effect (KRUSE, SCHMIDT, and MCCOLLUM) 553
Monoacetone *d*-xyloketose: (LEVENE and TIPSON) 603

N

Nitrogen: Non-protein, constituents, milk, human (ERICKSON, GULICK, HUNSCHER, and MACY) 145

XUM

Nucleotides: Ribose, synthesis (LEVENE and TIPSON) 113
Nutrition: Blood serum inorganic phosphorus, horse, effect (PEARSON) 1

O

Oxidation-reduction: (BALL) 515
Oxygen: Blood, ultramicrodetermination (DONAL) 783

P

Pancreas: Insulin, cattle, age effect (FISHER and SCOTT) 305
Pancreatectomy: Blood lipids, insulin effect (CHAIKOFF and KAPLAN) 267
Parathyroid extract: (MORGAN, KIMMEL, THOMAS, and SAMISCH) 531
Parathyroidectomy: Rickets, effect (JONES) 701
Pentocystine: Synthesis (DU VIGNEAUD, DYER, JONES, and PATTERSON) 401
Pepsin: Casein digestion (JONES and GERSDORFF) 707
Digestion, tissues, iron in (MCFARLANE) 245
Insulin hydrolysis (FISHER and SCOTT) 289
Zymogens (KLEINER and TAUBER) 501
Periplogenin: Trianhydro-, derivatives, ultra-violet absorption spectra (ELDERFIELD and ROTHEN) 71
Phosphate: Inorganic, blood, goat (CUTLER) 603
Phosphoric acid: Microdetermination, gasometric (KIRK) 191
Phosphorus: Blood, partition, chicken (HELLER, PAUL, and THOMPSON) 357
Inorganic, blood serum, age and nutrition, effect (PEARSON) 1
Phthiocol: Tubercle bacillus, human (BALL) 515
Pigment: Carotenoid, absorption spectra, liquid air temperatures (HILBERT and JANSEN) 97
—, cow-pea leaves, absorption spectra, liquid air temperatures (HILBERT and JANSEN) 97
Tubercle bacillus, human (BALL) 515
Potassium: Dietary, blood cell, red, sodium, influence (BUTLER and MACKAY) 107
Proline: Oxidation, tissues (BERNHEIM and BERNHEIM) 79
Prolinephosphoric acid: *l*-Hydroxy-, synthesis (LEVENE and SCHORMÜLLER) 595
Proteins: Amino acids, basic, determination (BLOCK) 457
Digestibility *in vitro* (JONES and GERSDORFF) 707
Methionine determination (BAERNSTEIN) 451
Proteolysis: Enzyme, fig tree latex (ROBBINS and LAMSON) 725

R

Reducing substances: Fluorosis (PHILLIPS, STARE, and ELVEHJEM) 41
Scurvy (PHILLIPS, STARE, and ELVEHJEM) 41

Rennin: Zymogens (KLEINER and TAUBER) 501
Reproduction: Fat-free diet, effect (EVANS, LEPKOVSKY, and MURPHY) 431
Fatty acids, saturated, as energy source (EVANS, LEPKOVSKY, and MURPHY) 441
Rhamnofuranoside: Theophylline-5-methyl-, synthesis (LEVENE and MUSKAT) 761
Ribose: *d*-, acetone derivatives (LEVENE and STILLER) 421
Nucleotides, synthesis (LEVENE and TIPSON) 113
Rickets: Parathyroidectomy effect (JONES) 701

S

Scurvy: Reducing substances (PHILLIPS, STARE, and ELVEHJEM) 41
Tissue respiration (PHILLIPS, STARE, and ELVEHJEM) 41
Serinephosphoric acid: *dl*-, resolution (LEVENE and SCHORMÜLLER) 595
Skin: Glucose, determination, Hagedorn-Jensen method (PILLSBURY and KULCHAR) 351
Sodium: Blood cell, red, dietary sodium and potassium, influence (BUTLER and MACKAY) 107
Dietary, blood cell, red, sodium, influence (BUTLER and MACKAY) 107
Sodium tungstate: Molybdate-free, preparation (FOLIN) 311
Sterility: Male, fat-free diet effect (EVANS, LEPKOVSKY, and MURPHY) 445
Strophanthidin: Trianhydro-, derivatives, ultra-violet absorption spectra (ELDERFIELD and ROTHEN) 71
Strophanthin: (ELDERFIELD and ROTHEN) 71

T

Tetraacetylglucuronic acid: α- and β-, methyl ester, synthesis (GOEBEL and BABERS) 63
Theophylline-5-methyl-rhamnofuranoside: Synthesis (LEVENE and MUSKAT) 761
Tissue: Alanine oxidation by (BERNHEIM and BERNHEIM) 79
Lipids, microdetermination, gasometric (KIRK, PAGE, and VAN SLYKE) 203
Proline oxidation by (BERNHEIM and BERNHEIM) 79
Respiration, fluorosis and scurvy (PHILLIPS, STARE, and ELVEHJEM) 41
Trianhydroperiplogenin: Derivatives, ultra-violet absorption spectra (ELDERFIELD and ROTHEN) 71
Trianhydrostrophanthidin: Derivatives, ultra-violet absorption spectra (ELDERFIELD and ROTHEN) 71
Tryspin: Anti-, egg white (BALLS and SWENSON) 409
Differentiation, anaphylactic test (TEN BROECK) 729

XUM

Tryptophane: *l*-, amides, growth effect (BAUGUESS and BERG) 615
—, —, kynurenic acid production (BAUGUESS and BERG) 615
Metabolism (BAUGUESS and BERG) 615
Tubercle bacillus: Human, phthiocol (BALL) 515
Lipids, chemistry (SPIELMAN) 87
Tuberculostearic acid (SPIELMAN) 87
Tuberculin: Purified, spectrum analysis (SPIEGEL-ADOLF and SEIBERT) 373
Tuberculostearic acid: Tubercle bacillus lipids (SPIELMAN) 87

U

Uric acid: Reagent, preparation (FOLIN) 311
Uridine 5-phosphoric acid: Synthesis (LEVENE and TIPSON) 113
Urine: Acid-base equilibrium (SENDROY, SEELIG, and VAN SLYKE) 479
Carbon dioxide tension (SENDROY, SEELIG, and VAN SLYKE) 479
Henderson-Hasselbalch equation, application (SENDROY, SEELIG, and VAN SLYKE) 463

V

Valine: Absorption rate, gastrointestinal tract (CHASE and LEWIS) 315
Isomers, absorption rate gastrointestinal tract (CHASE and LEWIS) 315
Vigna sinensis: *See* Pea
Viosterol: (MORGAN, KIMMEL, THOMAS, and SAMISCH) 531
Vitamin: B growth-promoting factor, whole wheat (HALLIDAY) 29
C, tissue, human (YAVORSKY, ALMADEN, and KING) 525

W

Wheat: Whole, vitamin B growth-promoting factor (HALLIDAY) 29

X

Xyloketose: *d*-, monoacetone (LEVENE and TIPSON) 603

Z

Zinc hydroxide: Blood filtrates, protein-free, preparation (LETONOFF) 693
